

# Does Your Pet Have A Drinking Problem?

**70 ml** → **1 kg**

Your pet needs 70 ml of water per kilogram of body weight each day!

WATER in 250 ml bowls

**80%** of your pet's body is **WATER**

Humans are made up of only **55-60% WATER**

## NO Sweat?

Dogs and Cats do sweat! They regulate their body temperature by:

**No. 1** in Dogs, **PANTING**

**No. 1** in Cats, **SWEATING** through their paws

Replenish their needed hydration by:

- Continuously provide fresh, clean water
- Make sure shade is available when outside
- Don't leave pets in parked vehicles in the summer
- Soak the coats of over-heated pets in cold water
- If pets are not adequately hydrated they cannot pant or sweat efficiently which means they cannot keep themselves cool and may over-heat
